

NetMonitor Configuration Notes

Quick Start Guide

Follow the instructions on this page to quickly access real-time weather data via the Weather View 32 software.

Before proceeding, read the installation section of the User Guide.

If you are -	
Installing for the first time	Begin the install. When a dialog appears asking if you have data to convert, select NO and continue with the installation process.
5.x	Install Weather View 32 into a new folder. After entering the serial number, a dialog appears asking if you have data to convert. Select NO and continue with the installation process. To continue using your Weather View 32 screens, after installing v5.1. copy the file wvscreens.dat from the Weather View 32 v5.0 Screen folder to the v5.1 Screen folder.

Start Weather View 32.

Choose the **Setup** menu and select the **Weather View Properties** menu item. Enter the ID for your station in the **Station ID** text box. Enter in the latitude and longitude of your location and the appropriate time zone information as well (if you don't have this information you can skip it for now). Select the climate data station nearest your location.

Now Weather View 32 is configured for use with your particular configuration. Proceed with configuring internet features and designing your Real-Time Monitoring display. See the User Guide.

Select the **Monitor Weather Now** menu item. Observe the status bar located along the bottom of the Weather View display screen, the far left item will detail the progress Weather View makes. After some housekeeping is handled, Weather View displays the Real-Time Monitoring screen.
